

ABSTRACT

DRUM-TYPE WASHING-DRYING MACHINE

A drum-type washing-drying machine comprises an ion generation apparatus 61 which is disposed above a water tank 20; wind sending means 2 which sends positive and negative ions generated from the ion generation apparatus 61; and an ion supply wind path 63 which is used to supply positive and negative ions generated from the ion generation apparatus 61 into a circulation wind path 39 via an ion introduction hole 22a that is formed through an upper portion of the water tank 20. One end 63a of the ion supply wind path 63 is connected to an outlet of the wind sending means 62, and the other end 63b is disposed away from and directed toward the ion introduction hole 22a.
