

# ABSTRACT

## INVENTION PATENT

New cephalosporins containing a substituted benzyloxyimino radical in position 17, their preparation process and their use as medicaments.

A subject of the invention is the products of general formula (I):

(I)

syn isomer, in which:

R<sub>1</sub>, R<sub>2</sub>, R<sub>3</sub> and R<sub>5</sub> represent a hydrogen atom, a halogen atom or a hydroxy, alkyloxy, mercapto, alkylthio, nitro, cyano, amino, alkylamino, dialkylamino, carbomoyl, (alkylamino) carbonyl, (dialkylamino) carbonyl, carboxy, alkoxy carbonyl, acyloxy,

R<sub>4</sub> represents a hydroxy or alkyloxy radical, it being understood that when R<sub>3</sub> represents a hydroxy or alkyloxy radical, R<sub>1</sub>, R<sub>2</sub> and R<sub>5</sub> do not all represent a hydrogen atom,

A and A' represent a hydrogen atom, an equivalent of an

alkali or alkaline-earth metal, magnesium, ammonium or an amino organic base,

or one or each of the  $\text{CO}_2\text{A}$  or  $\text{CO}_2\text{A}'$  groups represent  $\text{CO}_2^-$ .

These products possess useful pharmacological properties which justify their use as medicaments.
