

THIS SHEET HAS BEEN
REPLACEDAbstract of the Invention

A mixed green-emitting phosphor is manufactured by mixing $\text{InBO}_3:\text{Tb}$ and one selected from $\text{ZnS}:\text{Cu}, \text{Au}, \text{Al}$ and $\text{ZnS}:\text{Cu}, \text{Al}$, optionally with $\text{Zn}_2\text{SiO}_4:\text{Mn}$. A cathode ray tube adopting the
5 mixed green-emitting phosphor not only has good luminance and color purity, but also enhanced afterglow and luminosity characteristics.
