(54) Title: ARTICULATING BOLSTER AND METHODS OF USE

FIG. 3

(57) Abstract: A bolster (108) having a first section (122), a second section (124), and a third section (126). The bolster (108) may include a first gap (138) extending from a bottom side (130) to a first point (140) located between a midline (142) and a top side (128). The bolster (108) may include a second gap (144) extending from the top side (128) to a second point (146) located between the midline (142) and the bottom side (130). The first section (122) and the third section (126) are configured to rotate about the second section (124). A method of articulating the bolster (108) may comprise the steps of urging rotation of the first section (122) about the second section (124) and urging rotation of the third section (126) about the second section (124). The bolster (108) may be inflated or deflated to a predetermined air pressure.
