(54) Title: **PACKING PIECE HALF FOR A CABLE LEAD-THROUGH**

(57) Abstract

The invention relates to a packing piece half for a cable lead-through with a frame. The packing piece half (1) forms together with another packing piece half, a packing piece of essentially parallelepipedic shape. The packing piece half is provided with a cavity (3) which, together with the corresponding cavity in the other packing piece half, forms a through-channel. The size of the channel is adapted to the dimension of the cable, wire or the like in question. According to the invention, the packing piece half (1) is provided with at least one projecting tab (4-7), which is dimensioned so that, when folded over the cavity (3), it can be pressed down therein and thereby cover essentially the entire surface of the cavity (3) to reduce the size of the cavity.
