

ABSTRACT

MANAGEMENT SYSTEM OF GAMING CHIPS AND STORAGE BOX

A system (500) that manages a package (302) of shuffled playing cards (301S) and gaming chips (3) includes a storage box and a control apparatus. The storage box (200) is provided in association with a game table (21) and stores a plurality of shuffled playing cards (301S) and a plurality of chip cases (100) and also includes a card reader (305) that reads playing card ID codes of the shuffled playing cards (301S) and a chip reader (202) that reads case ID codes of the chip cases (100). The control apparatus (204) outputs total numbers of the shuffled playing cards and the chip cases stored in the storage box (200) and the playing card ID codes and case ID codes stored in the storage box (200) by monitoring read playing card ID codes and case ID codes.
