

ABSTRACT

“SYSTEMS AND METHODS FOR IMPROVING PRODUCTIVITY, HEALTH AND LIFE EXPECTANCY IN AQUACULTURE INDUSTRY”

A system and method, to improve productivity, health and Life expectancy of aquatic animals using an efficient and cost effective natural effector composition comprised of gram negative bacilli and is available in suitable packaging for marketing in various quantity forms as per the need of end users such as aquarium fish exporters, importers, warehouses, retailers and like. The said effector composition reduces nitrates, nitrites, and ammonia level drastically in short time and close to 0% and retains them at low concentrations consistently. Further, the DAO, DAA, DA7 associated with transportation of aquatic animals can be brought down to 0%.
