

Abstract

The purpose of the present invention is to prevent the fouling of polysilicon with a resin sheet so that the polysilicon is effectively prevented from being contaminated due to the resin sheet. The antifouling method for polysilicon according to the present invention comprises using a tube-shaped resin sheet having an inner surface and an outer surface to prevent the fouling of polysilicon, characterized in that the tube-shaped resin sheet or a resin sheet cut out of the said tube-shaped resin sheet is held, with the inner surface being kept in an unexposed state, and the inner surface is exposed just before use and brought into contact with the polysilicon.
