

I CLAIM:

1. A facility for playing a game with a golf club and golf balls, the facility comprising:
 - a site having a range area visibly divided into a plurality of
 - 5 contiguous target regions, each said target region being associated with a target identifier, and a tee area having a plurality of contiguous tees from which golf balls may be hit toward said range area;
 - scoring means located at said site for scoring a game, said scoring means setting out a sequence of said target identifiers so as to
 - 10 establish a corresponding sequence of designated target regions to which golf balls are to be hit from the same one of said tees with a golf club in order, and said scoring means providing means for recording a point score for each time a player hits a golf ball; and
 - a scoring system associated with said scoring means for
 - 15 awarding a point score according to the observed resting position of the golf ball relative to the designated target region.
2. A facility as claimed in claim 1, wherein said tee area is elevated relative to said range area.
3. A facility as claimed in claim 1, wherein said range area is
- 20 sloped upwardly in a direction away from said tee area.
4. A facility as claimed in claim 1, wherein said range area has side boundaries that diverge as they extend away from said tee area.
5. A facility as claimed in claim 1, wherein said range area is marked into at least three columns.
- 25 6. A facility as claimed in claim 1 further comprising a centre zone marked in at least one of said target regions.

AMENDED SHEET

7. A method for playing a game at a golf range facility comprising the steps of:

- 5 (a) determining a designated target region from scoring means that sets out a sequence of target identifiers, each of said target identifiers being associated with one of a plurality of contiguous, visibly divided target regions in a range area of the facility;
- 10 (b) hitting a golf ball with a golf club from one of a plurality of contiguous tees in a tee area of the facility toward said designated target region as determined in step (a);
- (c) recording by said scoring means a point score awarded according to the observed resting position of the golf ball hit in step (b) relative to said designated target region as determined in step (a); and
- 15 (d) repeating steps (a) - (c) while remaining at the same one of said contiguous tees until the sequence of target identifiers set out by said scoring means has been completed in order.

8. A method as claimed in claim 7, wherein said target regions are arranged in a grid of intersecting rows and columns, each of said target regions being identified by a grid marking having a row identifier and a column identifier.

20

9. A method as claimed in claim 7, wherein a centre zone is located in one or more of said target regions.

10. A method as claimed in claim 9, wherein, during said awarding points step, a player is awarded a different score according to whether said observed ball position is:

25

- in the centre zone of the designated target region;
- in the designated target region;

in a target region adjacent to the designated target region;
or elsewhere in the range area.

11. A method as claimed in claim 7, wherein, during said
awarding points step, a player is awarded a different score according to
5 whether his observed ball position is:

in the same column but a further row from the designated
target region;

in the designated target region;

adjacent to the designated target region; or

10 elsewhere in the range area.

12. A method as claimed in claim 7, wherein said scoring means
uses a single target identifier to correspond to a par 3 hole.

13. A method as claimed in claim 7, wherein said scoring means
uses two target identifiers to correspond to a par 4 hole.

- 15 14. A method as claimed in claim 7, wherein said scoring means
uses three target identifiers to correspond to a par 5 hole.

15. A facility as claimed in claim 1, wherein said scoring means is
provided by a pre-printed scorechart comprising:

a plurality of scoring columns; and

20 at least one target identifier row intersecting said scoring
column, at least one target identifier being marked along said target
identifier row in each said scoring column thereby designating a sequence
of target regions so as to simulate similar golf shots that a player would
make to reach a golf green in a conventional game of golf.

- 25 16. A facility as claimed in claim 15, wherein said scoring
columns include one target identifier for a par 3 hole, two target identifiers

for a par 4 hole and three target identifiers for a par 5 hole.

17. A facility as claimed in claim 15, further comprising a distance shot information row parallel to said target identifier row, said information row identifying whether said target identifier is scored as a distance shot.

18. A facility as claimed in claim 15, wherein nine scoring columns are provided and wherein two of said scoring columns include only one target identifier, two of said scoring columns include only three target identifiers, and five of said scoring columns include only two target identifiers.

19. A facility as claimed in claim 15, wherein eighteen scoring columns are provided and wherein four of said scoring columns include only one target identifier, four of said scoring columns include only three target identifiers and ten of said scoring columns include only two target identifiers.
