(54) Title: ENCLOSURE FOR ELECTRICAL INSTALLATIONS

(57) Abstract: The invention relates to an enclosure for electrical installations, the enclosure comprising a bottom part (1) and a cover part (2) fastened to the bottom part (1) by fastening means (3) comprising a latch (14) which, supported by a bearing, may be turned in relation to the bottom part (1) to open and close the fastening means (3), and an arm (5) which is bearing-mounted to the latch (14), whereby the cover (2) has a detent to receive the arm (5) and to fasten the cover to the bottom part (1) by means of the arm (5). In order for the enclosure getting dirty in use to not hinder fast opening of the enclosure and to have the external appearance of the enclosure smart at the fastening means (3), the detent is located in a recess formed in an edge of the cover (2), whereby attached to the arm (5) there is a cover piece (8) adapted to attach to the detent in the recess of the cover (2) whereby the cover piece (8) comprises a first outer surface and a second outer surface which at the recess of the cover make the outer surfaces of the cover uniform and such that the discontinuities formed by the recess of the cover on the top surface of the cover and correspondingly on the side surface of the cover are concealed.
