ABSTRACT

Disclosed in embodiments of the present disclosure are a display method and apparatus, an electronic device, and a storage medium. The method comprises : in response to a first operation acting on a first interface, the first interface being displayed on a target area of an interactive interface, and controlling the first interface and a preset second interface to move in a first direction, controlling the second interface to display in the target area, wherein if the second interface does not satisfy a preset condition, the second interface is controlled to enter a first display state, so that an upper boundary of the second interface is aligned with an upper boundary of the target area; in response to a second operation acting on the second interface in the first display state, controlling the second interface to move in a second direction, the second interface entering a second display state from the first display state; and triggering a state locking to limit the second interface to return from the second display state to the first display state. According to the display method provided in the present disclosure, the display control of the second interface is realized, and the interactive effect is improved.
