

ABSTRACT

Provided are a team transfer skill release method and apparatus, a device and a storage medium, relating to the field of human-computer interaction. The method comprises: displaying a first virtual character located in a virtual environment, the first virtual character having a team transfer skill (220); in response to a release operation for the team transfer skill, displaying a reminding control for the team transfer skill (240); in response to a triggering operation for the reminding control, sending reminding information to at least one teammate virtual character, the reminding information being used for reminding the at least one teammate virtual character to become a transfer target of the team transfer skill (260); and in response to satisfying a transfer condition of the team transfer skill, releasing the team transfer skill to transfer a second virtual character, the second virtual character being a teammate virtual character that becomes a transfer target of the transfer skill (280).
