

[Name of Document] ABSTRACT

[Name of Invention] REFRIGERATOR-FREEZER

[ABSTRACT]

[Problem] To obtain a refrigerator-freezer that is capable of improving ice making efficiency of an ice compartment 300.

[Solution] An ice compartment 300 including a single inlet port 302; an ice tray 1 disposed in the ice compartment 300, and partitionally formed with a plurality of ice cavities 11; and a baffle tray 2 connected to the inlet port 302, and forming a cold air passage 3 from the inlet port 302, in which the baffle tray 2 has a plurality of discharge ports 23 provided with the ice cavities 11 respectively to supply cold air to the ice tray 1 from above, and in which the cold air that has flowed into the ice compartment 300 from the inlet port 302 is supplied to a region above the ice tray 1 only through the discharge ports 23 of the baffle tray 2.
