(54) Title: METHOD FOR CONTROLLING A HOISTING OR PAYING OUT MOVEMENT AND HOISTING FRAME HAVING TILTABLE CABLE SHREAVE FOR USE THEREIN

(57) Abstract: The invention relates to a method for controlling a hoisting or lowering movement of a load, which is suspended from a hoisting mechanism of a crane by means of two or more hoisting cables (109L, 109R) trained round cable sheaves (106L, 106R) on the load, comprising of monitoring the position of the load and braking and/or stopping the hoisting mechanism upon detection of an undesirable position. The cable sheaves are herein each connected to the load for pivoting about a horizontal axis (115), and the position of the load is monitored by detecting a pivoting movement of at least one of the cable sheaves.
