(54) **Title:** POWER CONTROL FOR A CONTAINER VESSEL

FIG. 1

(57) **Abstract:** Disclosed is a power control system (100) for a container vessel. The power control system (100) has a power interface (105) for supplying energy to at least one reefer container (130) transportable by the container vessel. The power control system (100) also has a controller (110) configured to obtain load data representative of a load on a generator (120) of the container vessel, and target load range data representative of a target load range for the generator (120). The power control system (100) is configured to control the load such that the load falls within the target load range by the controller increasing energy supplied to the power interface (105) for storage at the at least one reefer container, when the load is below the target load range.
