(54) **Title**: MEDICAL HISTORY SYSTEM

FIG. 1

(57) **Abstract**: Embodiments described herein include generating a navigable medical history corresponding to a patient. Reference information related to medical records for the patient is stored in a referenced records database based on a standardized healthcare code in the medical records. The reference information is inserted into the referenced records database by the medical history system. The medical history system generates the navigable medical history associated with the patient based on the reference information.
