

ABSTRACT
CONTAINER CLOSURE

The invention relates to a container closure (10), having a closure bottom part (11) and a cap (12) and also a mouthpiece (15) and means (13) for piercing a closure foil, wherein a tamper-proof strip (21) is provided, wherein the tamper-proof strip (21) has a plurality of predetermined breaking points (22) oriented in the axial direction of the container closure (10) and is actuated by a spreading procedure.
