

ABSTRACT

A composition for forming a transparent resin layer of the present invention includes a polymerization initiator having a molar absorption coefficient (ϵ) at a wavelength of 365 nm of $1000 \text{ mol}^{-1}\cdot\text{L}\cdot\text{cm}^{-1}$ or less; a polymerizable compound; a polymer; and a solvent. The polymerization initiator is preferably at least one selected from the group consisting of an α -hydroxyacetophenone-based compound and a phosphine-based compound.
