

METHOD FOR OBTAINING MULTI-DIMENSIONAL INFORMATION BY PICTURE-BASED INTEGRATION AND RELATED DEVICE

ABSTRACT

The disclosure provides a method for obtaining multi-dimensional information by picture-based integration and a related device. The method includes the following operations. A to-be-detected picture is acquired. The to-be-detected picture is detected and multiple pieces of feature information are extracted from the to-be-detected picture. Target feature information and associated feature information are selected from the multiple pieces of feature information, and the target feature information is associated to the associated feature information to generate multi-dimensional information. The multi-dimensional information includes multiple pieces of feature information associated with each other. Automatic extraction and automatic association and integration of multiple pieces of feature information are achieved.
