

ABSTRACT OF THE DISCLOSURE (FIG. 4)

"LIQUID CRYSTAL DISPLAY"

A single-domain TN mode liquid crystal display includes an array substrate, an counter substrate, a
5 liquid crystal layer that is includes liquid crystal molecules, polarizer plates, and a diffusion layer that is disposed between a surface of the counter substrate and a surface of the polarizer plate. Inversion of
10 luminance at respective gray levels occurs within four levels of 64 gray levels in a case where an off-axis angle toward a major-axis direction of the liquid crystal molecules relative to a normal of the counter substrate is within 50° .
