(54) Title: ELECTRONIC CARD TABLE

(57) Abstract: An electronic card table and method provides an electronic card game to a plurality of players. The electronic card table includes a table, a plurality of electronic player interaction areas, a central display area and a game computer. The table has a table top with a playing surface. The electronic player interaction areas are located around a periphery of the table top. Each electronic player interaction area provides a player interface for interaction with one of the players. The central display area is located in a central location of the table top for displaying information to the players. The game computer is coupled to the plurality of electronic player interaction areas and the central display area for dealing a hand of the electronic card game composed of electronic cards, displaying the electronic cards on the electronic player interaction areas and/or the central display area, and administering the electronic card game using electronic chips and the electronic cards. The game computer determines a winner from among the players and awards a pot to the winner at the end of the hand.
