
Mast cell markers
-Tryptase, histamine, PGE2
Bacterial markers
-Antibodies to antigens
(flagellins)
Immune activation
Pathogens
Stress markers
-Cortisol, ACTH, CRH
-Gut hormones (NPY)
-Serotonin pathway
CNS
GI function
-motility
-pain
-secretion/absorption
Microbiome
Diet (FODMAP)
Antibiotics

FIG. 1

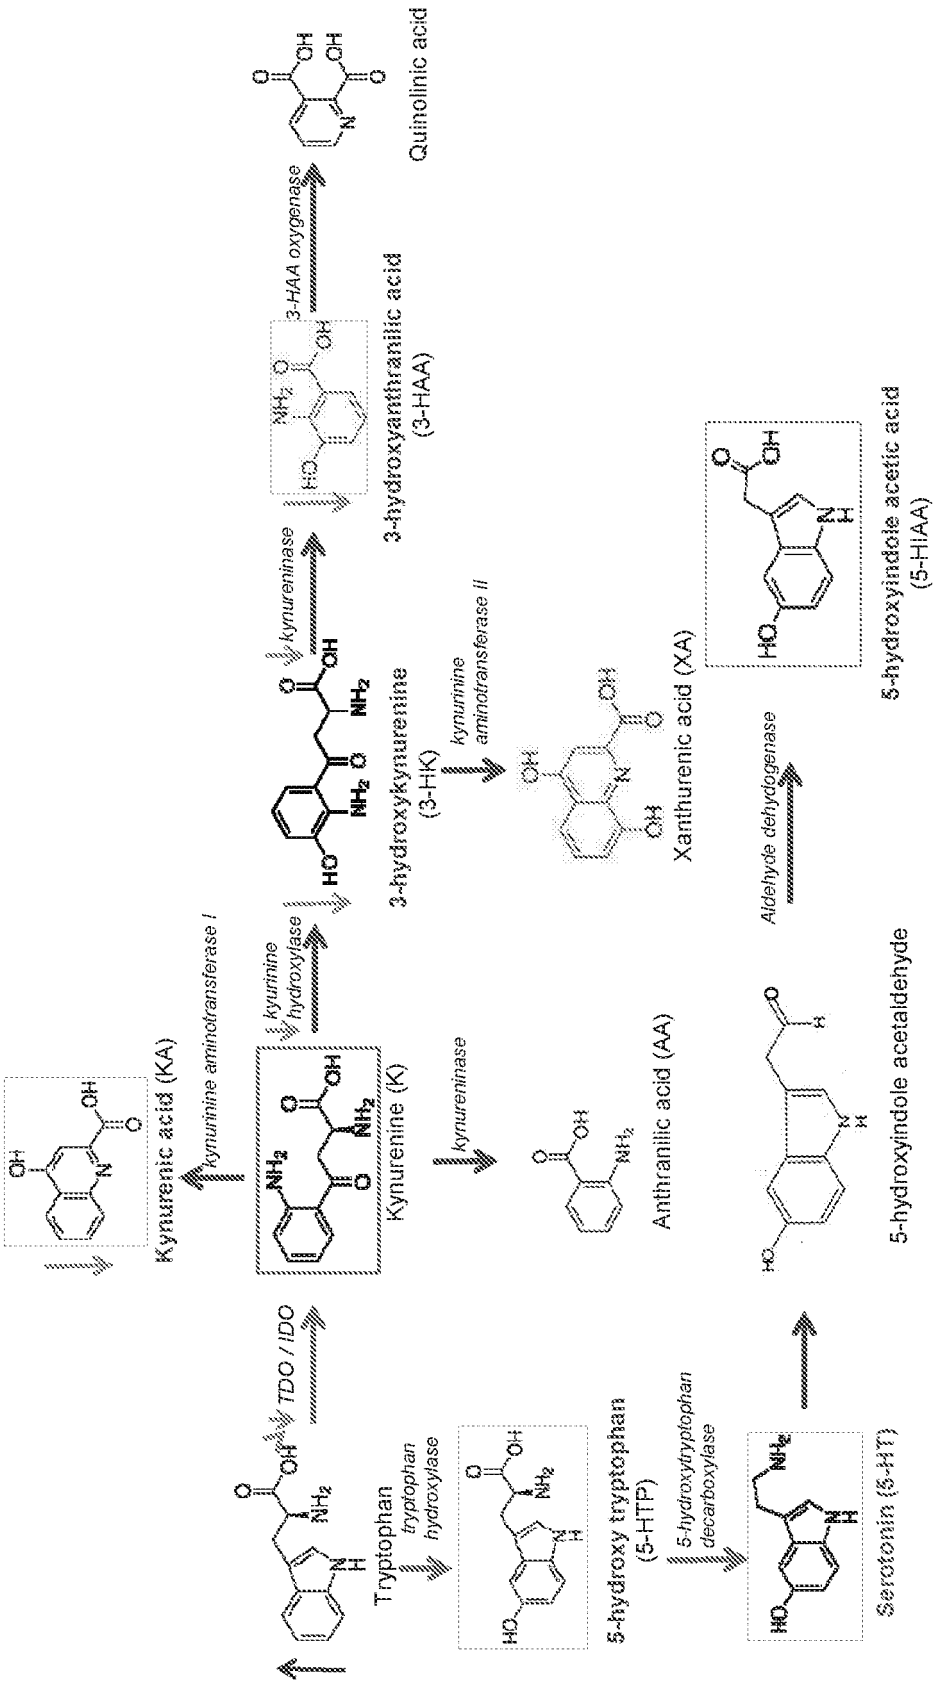

Kynurenic acid (KA)
kynurenine aminotransferase I
TDO / IDO
Tryptophan
tryptophan hydroxylase
5-hydroxy tryptophan (5-HTP)
5-hydroxytryptophan decarboxylase
Serotonin (5-HT)
L kyurinine hydroxylase
Kynurenine (K)
kynureninase
Anthranilic acid (AA)
kynureninase
3-hydroxykynurenine (3-HK)
kynurinine aminotransferase II
Xanthurenic acid (XA)
3-HAA oxygenase
3-hydroxyanthranilic acid (3-HAA)
Quinolinic acid
Aldehyde dehydrogenase
5-hydroxyindole acetaldehyde
5-hydroxyindole acetic acid (5-HIAA)

FIG. 2

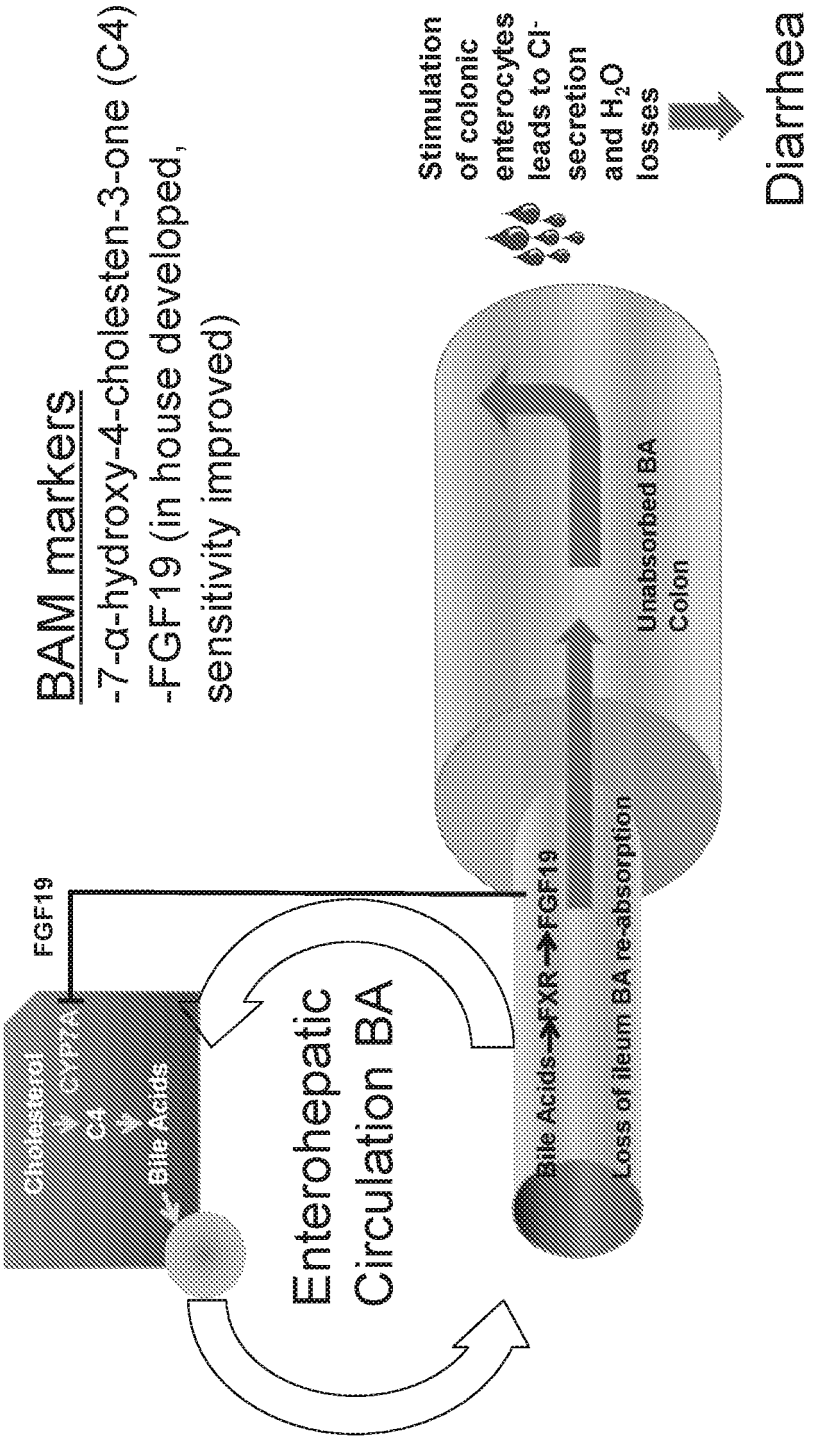

BAM markers
-7-α-hydroxy-4-cholesten-3-one (C4)
-FGF19 (in house developed, sensitivity improved)
Stimulation of colonic enterocytes leads to Cl- secretion and H2O losses
Diarrhea
Unabsorbed BA Colon
Bile Acids→FXR→FGF19
Loss of ileum BA re-absorption
Enterohepatic Circulation BA
FGF19
Cholesterol
CYP7A1
C4
Bile Acids

FIG. 9A

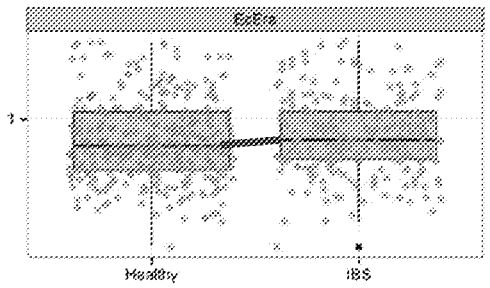

FIG. 9B

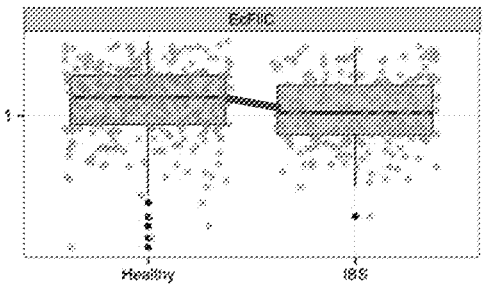

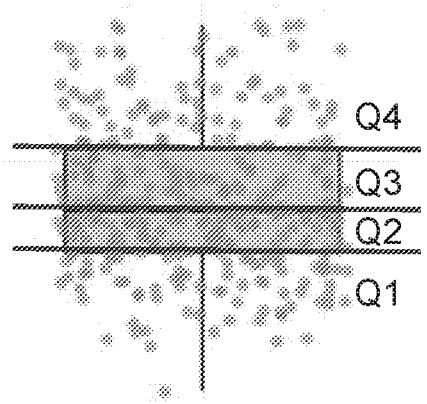

FIG. 9C

1) Logistic regressions including all of the markers.
   Lines represent βs (coefficients from regression/slope).
   Positive for IBS.
   Negative for healthy control.
2) Quartile from healthy controls.
3) Calculate Microbiome Score per subject.

Weighted quartile sum score:
Σ β*quartile over all markers
