(54) Title: WORK STATION APERTURE FRAME WITH JOINING APPENDAGES

(57) Abstract: A component support apparatus is provided for association with an aperture defined in the working platform of a work station or the like. The support apparatus includes an aperture frame for association with a perimeter portion of the aperture, at least one joining appendage that extends outwardly from a different edge portion of a lower edge of said aperture frame, and connection members that interconnect each of said joining appendages with said aperture frame. The support apparatus can be unitarily formed, be comprised of a plurality of cooperating components where the joining appendages are movable or adjustable relative to the aperture frame, or otherwise as desired. At least a portion of each joining appendage is adapted for connection to a component, such as, for example, a flat monitor support platform, rails for a slidable keyboard support tray, or the like.
