

Title of Invention: TARGET MONITORING APPARATUS, TARGET MONITORING
METHOD, PROGRAM, AND RECORDING MEDIUM

ABSTRACT

5

Provided is a target monitoring apparatus that enables automatic monitoring of subjects at high risk of accidents. A target monitoring apparatus of the present disclosure includes a state information acquisition part; an accident risk determination part, an assessment part, and a monitoring part, wherein the state information acquisition part acquires state information of a monitoring candidate, the accident risk determination part determines accident risk of the monitoring candidate based on the state information and alert criterion information, the assessment part assesses whether monitoring of the monitoring candidate is required based on the accident risk, and the monitoring part sets a monitoring candidate assessed to be in need of monitoring as a monitoring subject.
