

CASINO SYSTEM

ABSTRACT

5 A casino system in a casino using a gaming chip (72) to which
an RFID tag (721) storing identification information is attached,
comprising a registration device (325) for registering the
identification information of the gaming chip to be used in the
casino, and a database (326) for storing a list of the identification
10 information registered by the registration device (325). The list
includes status information that indicates whether or not the gaming
chip (72) is usable, and the registration device (325) makes the
status information usable for the gaming chip (72) that has already
been registered.
