(54) Title: PLANAR INDUCTOR

(57) Abstract: A planar inductor (50) comprises a conductive path in the form of a spiral pattern (53A-53D, 54A-54D). A conductive connecting path (62A, 63) connects a terminal (60) to an intermediate tap point (61A). The connecting path comprises at least one path portion which is radially directed with respect to the spiral pattern (53A-53D). The connecting path (62A, 63) can be routed via the inside of the spiral pattern. Where the connecting path comprises only radially-directed path portions, they are commonly joined at the centre (64) of the spiral pattern. Multiple path portions (62A, 62B) can each connect to the intermediate tap point of a respective conductive path. The connecting path can use a further conductive track (85) which is parallel to the conductive path which forms the spiral pattern.
