DESCRIPTION

Title of Invention: COMPOSITION CONTAINING FLUORINE OIL

Technical Field

[0001]

The present disclosure relates to a composition containing a fluorine oil.

Background Art

[0002]

Hydrofluoroethers (HFEs) have attracted attention as alternatives to chlorofluorocarbons (CFCs) and hydrochlorofluorocarbons (HCFCs) because of their low global warming potential (GWP), low ozone depletion potential (ODP), and low toxicity.

[0003]

PTL 1 discloses a cleaning agent containing an azeotropic mixture-like composition containing 1,1,1,3,3,3-hexafluoroisopropyl methyl ether, which is an HFE, and hexafluoroisopropanol.

[0004]

PTL 2 discloses that an azeotrope-like composition containing 1,1,1,2,3,3-hexafluoro-3-methoxy-propane, which is another HFE, and 1-bromopropane is usable in cleaning processes as a refrigerant.

PTL 2: JP2011-506681A

Summary

Technical Problem

[0006]

for use in a coating agent.

Item 5.

A solvent composition or cleaning composition for removing a fluorine oil, the composition comprising 1,1,1,3,3,3-hexafluoroisopropyl methyl ether (HFE-356mmz) and/or 1,1,2,3,3,3-hexafluoropropyl methyl ether (HFE-356mec).

Item 6.

A cleaning method comprising removing a fluorine oil by using a cleaning agent containing 1,1,1,3,3,3-hexafluoroisopropyl methyl ether (HFE-356mmz) and/or 1,1,2,3,3,3-hexafluoropropyl methyl ether (HFE-356mec).

Item 7.

A dissolution method comprising dissolving a fluorine oil by using a solvent containing 1,1,1,3,3,3-hexafluoroisopropyl methyl ether (HFE-356mmz) and/or 1,1,2,3,3,3-hexafluoropropyl methyl ether (HFE-356mec).

Item 8.

A coating method comprising applying the composition of any one of Items 1 to 3.

In one aspect, there is provided a composition comprising (A) 1,1,1,3,3,3-hexafluoroisopropyl methyl ether (HFE-356mmz) and/or 1,1,2,3,3,3-hexafluoropropyl methyl ether (HFE-356mec), and (B) a fluorine oil, wherein the fluorine oil is at least one compound selected from the group consisting of perfluoropolyether compounds, compounds containing a perfluoropolyether group and a functional group, and low-molecular polymers of chlorotrifluoroethylene.

In another aspect, there is provided a solvent composition or cleaning composition for removing a fluorine oil, the composition comprising 1,1,1,3,3,3-hexafluoroisopropyl methyl

ether (HFE-356mmz) and/or 1,1,2,3,3,3-hexafluoropropyl methyl ether (HFE-356mec), wherein the fluorine oil is at least one compound selected from the group consisting of perfluoropolyether compounds, compounds containing a perfluoropolyether group and a functional group, and low-molecular polymers of chlorotrifluoroethylene.

In another aspect, there is provided a cleaning method comprising removing a fluorine oil by using a cleaning agent containing 1,1,1,3,3,3-hexafluoroisopropyl methyl ether (HFE-356mmz) and/or 1,1,2,3,3,3-hexafluoropropyl methyl ether (HFE-356mec), wherein the fluorine oil is at least one compound selected from the group consisting of perfluoropolyether compounds, compounds containing a perfluoropolyether group and a functional group, and low-molecular polymers of chlorotrifluoroethylene.

In another aspect, there is provided a dissolution method comprising dissolving a fluorine oil by using a solvent containing 1,1,1,3,3,3-hexafluoroisopropyl methyl ether (HFE-356mmz) and/or 1,1,2,3,3,3-hexafluoropropyl methyl ether (HFE-356mec), wherein the fluorine oil is at least one compound selected from the group consisting of perfluoropolyether compounds, compounds containing a perfluoropolyether group and a functional group, and low-molecular polymers of chlorotrifluoroethylene.

In another aspect, there is provided a coating method comprising applying the composition as defined herein.

Advantageous Effects of Invention

[0008]

The present disclosure provides a novel composition containing HFE-356mmz and/or HFE-356mec and a fluorine oil. The present disclosure also provides a solvent composition or cleaning composition containing HFE-356mmz and/or HFE-356mec for removing a fluorine oil.

Description of Embodiments

[0009]

The present disclosure includes the following

CLAIMS

[Claim 1]

A composition comprising

(A) 1,1,1,3,3,3-hexafluoroisopropyl methyl ether (HFE-356mmz) and/or 1,1,2,3,3,3-hexafluoropropyl methyl ether (HFE-356mec), and

(B) a fluorine oil,

wherein the fluorine oil is at least one compound selected from the group consisting of perfluoropolyether compounds, compounds containing a perfluoropolyether group and a functional group, and low-molecular polymers of chlorotrifluoroethylene.

[Claim 2]

The composition according to claim 1, wherein the content of component (A) is 1 mass% or more and 99.99 mass% or less, and the content of component (B) is 0.01 mass% or more and 99 mass% or less, based on the total amount of component (A) and component (B).

[Claim 3]

The composition according to claim 1 or 2, for use in a coating agent.

[Claim 4]

A solvent composition or cleaning composition for removing a fluorine oil, the composition comprising 1,1,1,3,3,3-hexafluoroisopropyl methyl ether (HFE-356mmz) and/or 1,1,2,3,3,3-hexafluoropropyl methyl ether (HFE-356mec),

wherein the fluorine oil is at least one compound selected from the group consisting of perfluoropolyether compounds, compounds containing a perfluoropolyether group and a functional group, and low-molecular polymers of chlorotrifluoroethylene.

[Claim 5]

A cleaning method comprising removing a fluorine oil by using a cleaning agent containing 1,1,1,3,3,3-hexafluoroisopropyl methyl ether (HFE-356mmz) and/or 1,1,2,3,3,3-hexafluoropropyl methyl ether (HFE-356mec),

wherein the fluorine oil is at least one compound selected from the group consisting of perfluoropolyether compounds, compounds containing a perfluoropolyether group and a functional group, and low-molecular polymers of chlorotrifluoroethylene.

[Claim 6]

A dissolution method comprising dissolving a fluorine oil by using a solvent containing 1,1,1,3,3,3-hexafluoroisopropyl methyl ether (HFE-356mmz) and/or 1,1,2,3,3,3-hexafluoropropyl methyl ether (HFE-356mec),

wherein the fluorine oil is at least one compound selected from the group consisting of perfluoropolyether compounds, compounds containing a perfluoropolyether group and a functional group, and low-molecular polymers of chlorotrifluoroethylene.

[Claim 7]

A coating method comprising applying the composition of claim 1 or 2.
