

Abstract

The present application discloses a gas heating control system and a gas heating control method. The system includes: a signal collection module configured to collect internal environmental information of a pump body to be purged; a gas path module; and a control module configured to acquire the internal environmental information, determine a target temperature of gas according to the internal environmental information, control a heater to heat a gas flowing through a gas passage to the target temperature of gas, and control a valve body to be opened when a temperature of the gas flowing through the gas passage reaches the target temperature of gas.
