

INDOOR UNIT OF AIR CONDITIONER

ABSTRACT

An indoor unit (1) includes at least one fan (20A), a heat exchanger (50) surrounding the at least one fan (20A) from four directions of front, rear, left, and right, and a casing (10) that houses the fan (20A) and the heat exchanger (50). The casing (10) includes a suction port (11), a blow-out port (12, 13), an installation part (10e) that is provided in a side surface of the casing (10) to install the casing (10) on a wall surface (Wa), and a housing part (18) that is disposed closer to the installation part (10e) than the heat exchanger (50) is and houses at least a pipe (55) to be connected to the heat exchanger (50). The at least one fan (20A), the heat exchanger (50), the installation part (10e), and the housing part (18) are disposed side by side in the order of the at least one fan (20A), the heat exchanger (50), the housing part (18), and the installation part (10e) in side view.
