

Workpiece Receptacle

Abstract

A workpiece receptacle, in particular for an ultrasonic welding device has a receiving element (10) for receiving a workpiece. The receiving element (10) can be moved in relation to a base element (16). A bearing device (20) is disposed between the receiving element (10) and the base element (16) for this purpose. The bearing device (20) has spherical surfaces (28, 32) lying opposite one another.
