

## **AN LED LAMP SET**

### **ABSTRACT**

An LED lamp set used as a lighting apparatus in a building includes a  
5 plurality of frames installed in the building, and a plurality of LED devices  
located on the frames. The LED lamp set reduces the amount of power  
required, lengthens the usage life, and decreases costs. The appearance and the  
dimension of the LED lamp set are improved. The color rendering index is  
increased. The color, the light intensity and the color-temperature wavelength  
10 are easily controlled, and environmental pollution is avoided because no  
mercury is used.
