

ABSTRACT: (FIG. 1)

"RADIO COMMUNICATION DEVICES"

5 Data on various conversation sentences are
sent/received by radio between radio communication devices
remote from one another. Many conversation sentence data
items and different code data items are beforehand stored
in corresponding relationship in a conversation sentence
data storage ROM 3. When one of the conversation sentence
data items is selected by operation of a select switch, a
10 corresponding code data item is sent to a receiving end,
which is provided with a ROM having the same contents of
storage as the ROM 3. A conversation sentence is read from
the ROM in accordance with the received code data and
displayed on a display 7.
