(54) Title: 3D CONTENT AGGREGATION BUILT INTO DEVICES

FIG. 1

(57) Abstract: The claimed subject matter provides a system and/or a method that facilitates capturing a portion 2-dimensional (2D) data for implementation within a 3-dimensional (3D) virtual environment. A device that can capture one or more 2D images, wherein the 2D image is representative of a corporeal object from a perspective dictated by an orientation of the device. The device can comprise a content aggregator that can construct a 3D image from two or more 2D images collected by the device, in which the construction is based at least in part upon aligning each corresponding perspective associated with each 2D image.
