

Data Processing Method And Its Apparatus

ABSTRACT

In accordance with a plurality of processing requests,
a SAM chip generates IC card entity data including job
5 execution order data showing an order of execution of a
plurality of jobs forming processing in accordance with a
processing request and status data showing a state of
progress of execution of said plurality of jobs for each
of said processing requests. Further, the SAM chip selects
10 one entity data from said plurality of entity data, selects
and executes the job to be executed next based on the status
data and processing order data of said selected entity data,
and updates the status data in accordance with execution
of said job.
