CLAIMS

1. A neck pillow comprising a cylindrical body that can encircle a neck of a human body,

wherein the neck pillow is wearable around and detachable from the neck,

wherein the cylindrical body has hardness for stably supporting the neck of the wearer and is provided with a zip fastener that is openable and closable on a front side of the wearer, and

wherein degree of opening of the zip fastener can be adjusted by a millimeter unit from an upper edge of the cylindrical body toward the lower side in accordance with a height of a lower jaw of the wearer.

2. The neck pillow according to claim 1, wherein the cylindrical body has a shape in which the front side of the wearer extends downward longer than the back side.

3. A neck pillow comprising a cylindrical body that can encircle a neck of a human body,

wherein the neck pillow is wearable around and detachable from the neck,

wherein the cylindrical body has hardness for stably supporting the neck of the wearer and is provided with a fastener that is openable and closable on a front side of the wearer, and has a shape in which the front side of the wearer extends downward longer than the back side, and

wherein degree of opening of the fastener can be adjusted by a millimeter unit from an upper edge of the cylindrical body in accordance with a height of a lower jaw of the wearer.

4. The neck pillow according to claim 3, the fastener is a zip fastener or a hook-and-loop fastener.

5. The neck pillow according to any one of claims 1 to 4, wherein the fastener has a length of 10 to 25 cm.

6. The neck pillow according to any one of claims 1 to 5, wherein the fastener is openable and closable from at least one of a top and a bottom thereof.

7. The neck pillow according to any one of claims 1 to 6, wherein the cylindrical body has a shape in which the front side of the wearer extends 1 to 15 cm downward longer than the back side.

8. The neck pillow according to any one of claims 1 to 7, wherein the cylindrical body has at least a length such that the upper edge is positioned near the lower jaw of the wearer, and a lower edge is positioned at an upper part of the sternum of the wearer, on the front side of the wearer.

9. The neck pillow according to any one of claims 1 to 8, wherein the cylindrical body has a shape in which an inner surface surrounding the neck is wider on the front side toward the lower side of the cylindrical body.

10. The neck pillow according to claim 9, wherein the cylindrical body has a shape in which the lower edge on the front side extends 0.1 to 10 cm longer than the upper edge with respect to a length in a front-back direction of the inner surface surrounding the neck.

11. The neck pillow according to any one of claims 1 to 10, wherein the cylindrical body comprises four to sixteen bag bodies configured to enclose filling material therein, at least in an upper part of the cylindrical body.
