

ABSTRACT

A method for applying for a payment token, an apparatus, a system, and a server. The method comprises : after receiving a call instruction to call a first application module, displaying bound payment accounts for a user to select one payment account therefrom, wherein the call instruction carries merchant information of the first application module (S101); and sending a bound token authorization request to a server, such that the first application module applies to the server for a payment token according to a bound token authorization code obtained from the request, wherein the bound token authorization request carries the merchant information of the first application module and the payment account selected by the user (S102).
