

A MIXING MODULE USED FOR REFRIGERANT PROVIDING DEVICE

ABSTRACT

5 In a module mixing and spraying a refrigerant and a composition, the module has a mixing space where a refrigerant spray unit is disposed and an inlet hole is formed, and when the refrigerant is sprayed, a negative pressure is formed in the inlet hole to allow the composition
10 to be introduced, so that the refrigerant and the composition may be sprayed while being mixed together. At this point, in case of spraying the refrigerant and the composition in the mixed state, various problems may occur, and a guide member having various shapes may be disposed in the mixing space in
15 order to solve the various problems.
