(57) Abstract: The present invention refers to muteins of the bacteriophage lambda integrases and to nucleic acid molecules comprising a nucleotide sequence encoding such muteins of the lambda integrases. The invention further refers to host cells containing a nucleic acid molecule comprising a nucleotide sequence encoding such muteins of the lambda integrases. The invention also refers to methods of recombining nucleic acids of interest into target nucleic acids in the presence of the muteins of the lambda integrases, as well as sequence specific recombination kits.
