

**Method for Viewing Document Information on a Mobile  
Communication Device**

**ABSTRACT**

5        A process for viewing document information on a mobile communication device  
without having to retrieve the full document onto the device. The solution is client - server  
based. The client is the mobile device attachment viewing application and the server is the  
document (attachment) handling process on a remote machine. The process comprises  
server document information construction and delivery, and document information display  
10 on the mobile device.
