(54) Title: NOTIFICATION SYSTEM UTILIZING SELF-ENERGIZING SWITCHES

Fig-1

(57) Abstract: An example notification system includes a power supply and a notification device in selective electrical communication with the power supply. The notification device provides a notification to a building service location when the notification device is electrically connected with the power supply. A receiver is electrically connected between the power supply and the notification device. The receiver is operative to selectively electrically connect the notification device with the power supply in response to a wireless communication. A switch includes a wireless transmitter portion powered by a self-energizing portion. The wireless transmitter portion communicates the wireless communication to the receiver in response to an actuation of the switch.
