

ABSTRACT**Railway vehicle**

A railway vehicle including a driver's console of the railway vehicle and a support (20), the support (20) being configured to support the driver's console, the support (20) including a first upper face delimiting the support (20) in an elevation direction of the railway vehicle, the console including driving means (45) of the railway vehicle.

The console is rotatable relative to the support (20) between at least one deployed position in which the driving means (45) are accessible for an operator and a retracted position in which the driving means (45) are inaccessible for the operator, the console being accommodated in a cavity (42) of the support (20) when the console is in the retracted position, the console extending outside the support (20) from the first upper face when the console is in the deployed position.
