ABSTRACT

Systems and methods are provided for automatically determining guaranteed delivery times and generating a calendar of the guaranteed delivery times for user selection. One method comprises receiving, from a user device, a request for an order, the request including product information and location information. The method further comprises searching a database using the location information to determine available times for delivering a product associated with the product information, the database comprising location data, product data, and time data and determining, based on a comparison of the location data and the received location information, available times for delivering the product. The method further comprises presenting a visual display of guaranteed available times for delivery of the product, based on the determined available times; receiving, from the user device, a selection of an available time; and based on the selected available time, sending an indication that the order has processed the determined available time.
