

Patent Application No.: 10201509498T
Title of Invention: threeBuzz™ - Mobile Application
Applicant: QUOD PTE. LTD.

CLAIMS

What is claimed is:

1. A mobile app which is a software application developed by “threeBuzz” for use with a mobile device such as a smartphone, a display screen and internet connectivity, and comprising:
 - (a) a mobile app having internet connectivity available for downloading by the user to his/her mobile device wherein the said device is a smartphone;
 - (b) after installation of the mobile app, the user sign up a new account with threeBuzz by entering his/her email address as the “User ID” and a self-chosen password although it is optional for the user to enter his/her other personal contact details;
 - (c) The email address and self-chosen password is transmitted to threeBuzz’s system and the user will receive an authentication email from threeBuzz with a “Code”. The user is required to enter the correct code to activate the mobile app and will be able to start using the mobile app on his/her device wherein the device is a smartphone.
2. A mobile app which is a software application as recited by claim 1 and further comprising:
 - (a) Information inputting means for inputting information belonging to the user. Mandatory information required will include the user’s name and email address. Optional information which may include the user’s mobile number, home number, address and identity card number;
 - (b) Information inputting means for inputting information on the user’s insurances, wills, wish and others by taking photographs using the app’s camera function, of the insurance policies, wills, wish, bank statements, shares statements, property title deeds, safe deposit box hire agreements, name cards of agents;
 - (c) Information inputting means for inputting information on at least one (1) but up to three (3) of the user’s self-chosen “Trusted Persons”. Mandatory information required will include the Trusted Person’s name and email address. Optional information may include the Trusted Person’s mobile number, date of birth, identity card number and notes;
 - (d) Information storing means for storing the information and photographs inputted and uploaded by the user.

3. A mobile app which is a software application as recited by claim 1 and further comprising:
- (a) ThreeBuzz will start to monitor the health status of the user three (3) months from the date of the sign up of the mobile app by transmitting a message either via email, text message or push message function on the app to the user's mobile device wherein the device is a smartphone to ask if the user is well ThreeBuzz will transmit a total of up to three (3) rounds of checks to the user;
 - (b) ThreeBuzz will be able to receive a response from the user via the mobile device indicating that the user is well and it will not be required for ThreeBuzz to contact any of his/her Trusted Persons to check on his/her health status and a time-counter will reset the next cycle of check three (3) months from the user's date of response;
 - (c) In the event the user did not transmit his/her response after a total of three rounds of checks, ThreeBuzz will transmit a message via email to the first of the list of Trusted Persons to enquire if the user is well. ThreeBuzz will transmit a total of up to three (3) rounds of checks via emails to the first Trusted Person;
 - (d) ThreeBuzz will be able to receive a response from the Trusted Persons via the mobile device indicating that the user is well and a time-counter will reset the next cycle of check three (3) months from the Trusted Person's date of response;
 - (e) In the event the first Trusted Person did not transmit his/her response after all the three (3) emails from ThreeBuzz, ThreeBuzz will proceed to transmit a message via email to the second Trusted Person with the same purpose as the first Trusted Person;
 - (f) In the event the second Trusted Person did not transmit his/her response after all the three (3) emails from ThreeBuzz, ThreeBuzz will proceed to transmit a message via email to the third Trusted Person with the same purpose as the first and second Trusted Persons;
 - (g) In the event that the user and all the chosen Trusted Persons did not transmit a response to ThreeBuzz after all the checks transmitted by ThreeBuzz, a new cycle of checks on the user's health status by repeating the sequence as seen in claim 3 (a) to (f).
 - (h) In the unfortunate event that the user did not transmit a response to any of the transmitted message either via email, text message or push message function on the app to the user's mobile device wherein the device is a smartphone to check if the user is well and thereafter a response was transmitted by any of the Trusted Persons and received by ThreeBuzz informing that the user was dead or incapacitated, ThreeBuzz will require all the named Trusted Persons to provide a written confirmation and documentary proof (e.g. death certificate, medical report etc) containing the same information before releasing the information inputted and stored by the user to all the Trusted Persons at the same time for their necessary follow-ups to initiate claims and/or the relevant legal procedures.
4. A computer-readable storage media comprising computer-executable instructions for implementing the mobile app of any of the claims 1 – 3.
