

INFORMATION PROCESSING APPARATUS AND INFORMATION
PROCESSING METHOD

[ABSTRACT]

The present disclosure relates to an information processing apparatus and an information processing method which are capable of setting AdaptationSet that does not include Representation.

A file generating apparatus sets first AdaptationSet including a plurality of items of Representation corresponding to encoded streams having predetermined bit rates and second AdaptationSet not including Representation. The present disclosure is applicable to a file generating apparatus, etc. of an information processing system that distributes encoded streams of a mosaic image as an image of a moving-image content to a moving-image playback terminal according to a process equivalent to MPEG-DASH, for example.
