(54) Title: MULTI-BLOCKCHAIN TOKEN REBALANCER

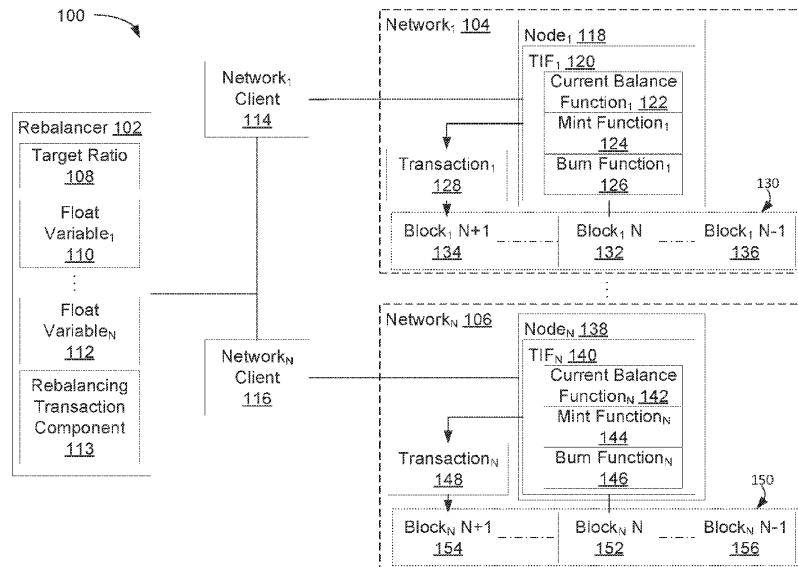

FIG. 1

(57) Abstract: Certain aspects of the present disclosure provide techniques for multi-blockchain token rebalancing. According to certain embodiments, a target ratio defining a first quantitative relationship between an amount of a token present is determined for each of a plurality of blockchains. A current amount of the token is received for a first blockchain, and in some embodiments, a first ratio is generated for the token present on each of the plurality of blockchains, based on the current amount. The current amount is compared to the target ratio to generate a ratio difference. Based on the ratio difference, a rebalancing transaction is executed on the first blockchain to bring the amount of the first token closer to the target ratio for the first blockchain.
