SUMMARY OF THE INVENTION

One ~~aspect~~embodiment of the ~~invention~~present disclosure pertains to an IPE compound, as described herein.

In an aspect, there is provided a compound which is [((1*R*,2*S*,5*R*)-2-isopropyl-5-methyl-cyclohexanecarbonyl)-amino]-acetic acid isopropyl ester.

Another ~~aspect~~embodiment of the ~~invention~~present disclosure pertains to a composition comprising an IPE compound, as described herein.

In another aspect, there is provided a composition comprising a compound as defined above and a pharmaceutically acceptable carrier, diluent, or excipient.

Another ~~aspect~~embodiment of the ~~invention~~present disclosure pertains to an IPE compound, as described herein, for treatment of the human or animal body by therapy.

In another aspect, there is provided a compound as defined above, for treatment of the human or animal body by therapy.

Another ~~aspect~~embodiment of the ~~invention~~present disclosure pertains to an IPE compound, as described herein, for treatment of sensory discomfort in a human, as described herein.

Another ~~aspect~~embodiment of the ~~invention~~present disclosure pertains to a method of treatment of sensory discomfort in a human, as described herein, comprising administration of a therapeutically effective amount of the IPE compound, as described herein.

Another ~~aspect~~embodiment of the ~~invention~~present disclosure pertains to use of an IPE compound, as described herein, in the manufacture of a medicament for the treatment of sensory discomfort in a human, as described herein.

In one aspect, there is provided the use of a compound as defined above, in the manufacture of a medicament for treatment of sensory discomfort of non-keratinized stratified epithelial (NKSE) tissue of a human.

In another aspect, there is provided the use of a compound as defined above, in the manufacture of a medicament for treatment of sensory discomfort of a lining of the oral cavity, an internal portion of the lips, a pharyngeal surface, or an esophageal surface of a human.

In another aspect, there is provided the use of a compound as defined above, in the manufacture of a medicament for treatment of sensory discomfort associated with oral mucositis in a human.

In another aspect, there is provided the use of a compound as defined above, in the manufacture of a medicament for treatment of airway tightness in a human.

In another aspect, there is provided the use of a compound as defined above, in the manufacture of a medicament for treatment of larynx tightness, trachea tightness, and/or bronchi tightness in a human.

In another aspect, there is provided the use of a compound as defined above, in the manufacture of a medicament for treatment of discomfort in the airways in a human.

In another aspect, there is provided the use of a compound as defined above, in the manufacture of a medicament for treatment of discomfort in the larynx, discomfort in the trachea, and/or discomfort in the bronchi in a human.

In another aspect, there is provided the use of a compound as defined above, in the manufacture of a medicament for treatment of choking in a human.

In another aspect, there is provided the use of a compound as defined above, in the manufacture of a medicament for treatment of cough in a human.

In another aspect, there is provided the use of a compound as defined above, in the manufacture of a medicament for treatment of dyspnea in a human.

As will be appreciated by one of skill in the art, features and preferred embodiments of one aspect of the ~~invention~~disclosure will also pertain to other aspects of the ~~invention~~disclosure.
