(54) Title: ROTARY SPINNING ELECTRODE

(57) Abstract: The invention relates to the rotary spinning electrode (1) of an elongated shape into the device for production of nanofibres through electrostatic spinning of polymer solutions comprising a pair of end faces (2, 3), between them there are positioned spinning members formed by wire, which are distributed equally along the circumference and parallel with axis of rotation (41) of the rotary spinning electrode (1), while the end faces (2, 3) are made of electrically non-conducting material and all the spinning members are mutually connected in a electrically conductive manner.
