(54) Title: SCAFFOLDING SYSTEM

(57) Abstract: A scaffolding system and method of moving a scaffolding assembly (2) of said system, the system including a scaffold assembly including a plurality of elongate members (7,31), said members including support portions, a plurality of brackets (3,23) for mounting directly or indirectly to a structure, said brackets (3,23) including retaining means for releasably retaining said members in a lengthwise upright orientation when mounted to a structure, and supporting means (25,32) for supporting at least part of the weight of said members, and guides for guiding the members during repositioning of the assembly on the structure. The guides guide the members (7,31) during raising and/or lowering of the assembly (2), and the supporting means (25,32) being arranged to allow passage of said support portions (27,36) during raising of the assembly (2) but prevent passage of said support portions (27,36) during lowering of the assembly (2) that alleviates problems known in the art by providing a system that is more readily movable despite poor weather conditions and which is simpler and more efficient.
