Abstract

A container (10) comprising: a first portion (20) within the container (10) to contain a first substance; a second portion (30) within the container (10) to contain a second substance; and a frangible seal (40) to hermetically seal the first portion (20) from the second portion (30), the seal (40) having a gripping portion (50) accessible from the exterior of the container (10); wherein a manual force is applied to the gripping portion (50) to break the seal (40) and cause mixing of the first and second substances within the container (10).
