(54) Title: IMPROVED PERFORATED LID FOR CONTAINERS FOR COOKING FOOD

Fig. 4

(57) Abstract: The present invention concerns an improved perforated lid (10) for containers for cooking foods, comprising holes (15) for the passage of vapour and gas going upwards and of condensed vapour going downwards and means for cooling and condensing vapour passing through said holes, and means for supporting said means for cooling vapour, wherein said means for cooling vapour are made of a sequence, starting from the container for cooking foods and going upwards, comprised of a perforated lower plate (11), at least one perforated intermediate plate (12) and an upper plate (13) that is not perforated, and said means for supporting said means for cooling vapour are made of a lower spacing element (16), positioned between said lower plate (11) and said intermediate plate (12) and of an upper spacing element (18), positioned between said intermediate plate (12) and said upper plate (13). The invention further concerns a fryer (20) for use with said perforated lid (10).
